## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 8\_Q1

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotExceptionAtTheRateExceptionDomainException

A typical email address should have a ". " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

#### ***Input Format***

The first line of input contains the email to be validated.

#### ***Output Format***

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

### **Sample Test Case**

Input: sample@gmail.com

Output: Valid email address

### **Answer**

```
// You are using Java
import java.util.Scanner;

class DotException extends Exception {
    public DotException(String message) {
        super(message);
    }
}

class AtTheRateException extends Exception {
    public AtTheRateException(String message) {
        super(message);
    }
}

class DomainException extends Exception {
    public DomainException(String message) {
        super(message);
    }
}

class EmailValidator {

    public static void validateEmail(String email) throws DotException,
AtTheRateException, DomainException {
        int length = email.length();
        int atCount = 0;

        for (char ch : email.toCharArray()) {
            if (ch == '@') atCount++;
        }
    }
}
```

```
if (atCount != 1) {
    throw new AtTheRateException("Invalid @ usage");
}

if (email.startsWith(".")) || email.startsWith("@") || email.endsWith(".") ||
email.endsWith("@")) {
    throw new DotException("Invalid Dot usage");
}

for (int i = 0; i < length - 1; i++) {
    char curr = email.charAt(i);
    char next = email.charAt(i + 1);
    if ((curr == '.' && next == '.') ||
        (curr == '@' && next == '@') ||
        (curr == '.' && next == '@') ||
        (curr == '@' && next == '.')) {
        throw new DotException("Invalid Dot usage");
    }
}

String[] parts = email.split("@");
String domainPart = parts[1];

int dotCountDomain = 0;
for (char ch : domainPart.toCharArray()) {
    if (ch == '.') dotCountDomain++;
}

if (dotCountDomain != 1) {
    throw new DotException("Invalid Dot usage");
}

int lastDotIndex = domainPart.lastIndexOf('.');
if (lastDotIndex == domainPart.length() - 1) {
    throw new DotException("Invalid Dot usage");
}

String domainExt = domainPart.substring(lastDotIndex + 1);

if (!(domainExt.equals("in") ||
      domainExt.equals("com") ||
      domainExt.equals("net")) ||
```

```
        domainExt.equals("biz")) {
    throw new DomainException("Invalid Domain");
}
}

public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    String email = sc.nextLine().trim();

    try {
        validateEmail(email);
        System.out.println("Valid email address");
    } catch (DotException e) {
        System.out.println("DotException: " + e.getMessage() + " Invalid email
address");
    } catch (AtTheRateException e) {
        System.out.println("AtTheRateException: " + e.getMessage() + " Invalid
email address");
    } catch (DomainException e) {
        System.out.println("DomainException: " + e.getMessage() + " Invalid email
address");
    }
}
```

**Status : Correct**

**Marks : 10/10**
