## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### ***Input Format***

The input consists of an integer N, representing the number to be checked.

##### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

### ***Answer***

```
import java.util.Scanner;
class main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int N=sc.nextInt();
        int numDigits = 0;
        int sum=0,temp=N;
        while(temp>0){
            sum += temp % 10;
            temp /=10;
            numDigits++;
        }
        if(sum == numDigits){
            System.out.println("The number of digits in "+N+" matches the sum of its
digits.");
        }
        else{
            System.out.println("The number of digits in "+N+" does not match the
sum of its digits.");
        }
    }
}
```

**Status : Correct**

**Marks : 10/10**
